What to do in Case of a Manure Spill

1. Eliminate the source.

- Stop manure application or pumps.
- Close valves
- Separate pipes, creating an air gap and stopping flow.
- Transfer manure/liquid to another basin or lagoon.

2. Contain the spill, if possible

- Create a containment dam in the field, ditch or stream.
- In a field, use tillage equipment to slow the flow.
- Check for tile flows.
- Construct a temporary holding basin down slope.
- Ensure that you do not damage the embankment while creating a temporary basis.
- If possible, place soil over the point or seepage, ensuring that you do not drive over or compact the seepage point.

3. Assess the extent of the spill and note any obvious damages.

- Did the spill reach any surface waters, well casings or other sensitive areas?
- How much was released?
- What time?
- Did any damage occur (employee injury, fish kills, or property damage)?
- Can the spill reach streams?
- 4. Contact the appropriate agencies.
- 5. Clean up the spill and make repairs.
- 6. Prepare and submit summary.
